DETAILED ACTION

This application is a 371 of PCT/EP00/07252.

Claims 1-17 are pending.

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-6, drawn to a mutant cytochrome P450 monooxygenase.

Group II, claim(s) 7-11, drawn to DNA encoding the mutant monooxygenase of Group I.

Group III, claim(s) 12-17, drawn to a process for the enzymatic production of terminally or subterminally hydroxylated aliphatic carboxylic acids using the mutant monooxygenase of Group I.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking Groups I-III appears to be that they all relate to a mutant cytochrome P450 monooxygenase.

However, Graham-Lorence et al. (from PTO-1449) teach a mutant cytochrome P450 monooxygenase, F87V, having regio- and stereoselective activity towards aliphatic carboxylic acids, a property lacking in the wildtype enzyme (abstract, page 1127). Therefore, the mutant cytochrome P450 monooxygenase of Graham-Lorence et al. has an altered substrate profile in the terminal and/or subterminal enzymatic hydroxylation of aliphatic carboxylic acids.

Art Unit: 1652

Therefore, the technical feature linking the inventions of Groups I-III does not constitute a special technical feature as defined by PCT Rule 13.2, as it does not define a contribution over the prior art.

The special technical feature of Group I is a mutant cytochrome P450 monooxygenase.

The special technical feature of Group II is DNA encoding a mutant cytochrome P450 monooxygenase.

The special technical feature of Group III is a process for the enzymatic production of terminally or subterminally hydroxylated aliphatic carboxylic acids using a mutant cytochrome P450 monooxygenase.

Accordingly, Groups I-III are not so linked by the same or a corresponding special technical feature as to form a single general inventive concept.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
